

BEAVERS · AUTHORISED AGI DEALER

Your grain facility. Every detail considered.

AGI technology. Built by Beavers.

Turnkey solutions for grain storage and handling.

DESIGN / EQUIPMENT / CONSTRUCTION / MAINTENANCE

THE ENTIRE FLOW, IN ONE PROJECT

From intake to dispatch.

Grain storage and handling facility. Photograph: AGI.

INTAKE → CONDITIONING → STORAGE → DISPATCH

We coordinate equipment, civil works and the facility's operating requirements. We start with the grain you store, seasonal volumes and how you intend to run your facility.

THE BEAVERS-AGI PARTNERSHIP

Technology and construction. Planned together.

Grain technology

Storage, handling, conditioning and monitoring.

Equipment selected to suit capacity and throughput.

Design and construction

Project configuration, civil works and installation.

Coordination, repairs and maintenance.

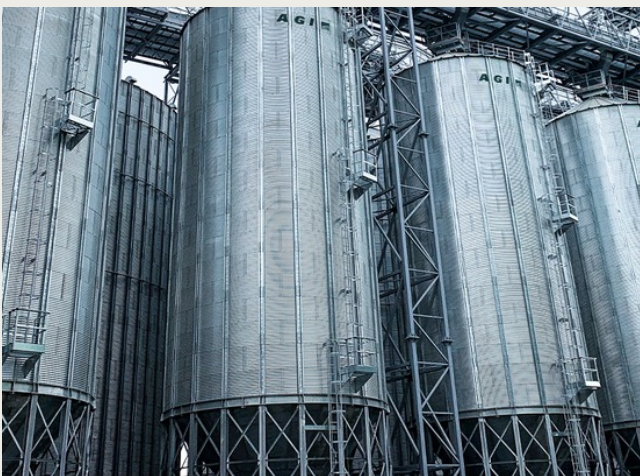

One partner for the project you entrust to us.

STORAGE / AGI FRAME

Silos designed around the way you work.

Flat-bottom silos. Photograph: AGI.

Hopper-bottom silos. Photograph: AGI.

Hopper-bottom silos

An option for operations requiring gravity discharge. Silo selection depends on the product, capacity and operating requirements.

AGI images and equipment. The configuration is defined for each project.

HANDLING / AGI PTM

Grain on the move. A coordinated flow.

Belt conveyor. Photograph: AGI.

Chain conveyors

Routes and throughput matched to intake, transfer and discharge.

Bucket elevators

Vertical handling integrated with silos and other equipment.

AGI images and equipment. The configuration is defined for each project.

CONDITIONING / AGI SOLUTIONS

Ready for storage.

Grain dryer from the AGI portfolio.

AGI PTM intake and filtration system.

AGI images and equipment. The configuration is defined for each project.

Drying and intake

We assess drying requirements and intake integration based on the product, moisture content and target throughput.

AERATION / AGI FRAME

Air is part of the solution.

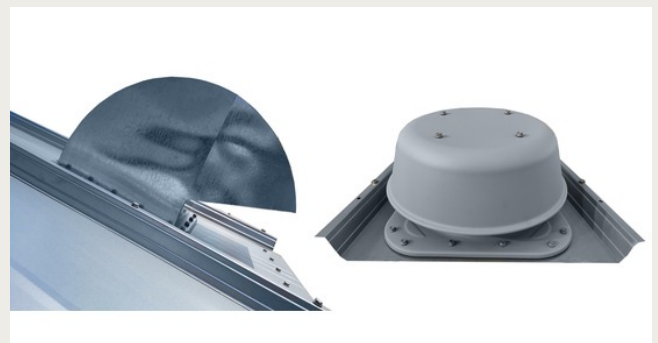

Aeration channels and grids. Photograph: AGI.

Fans

Equipment matched to the storage configuration and product requirements.

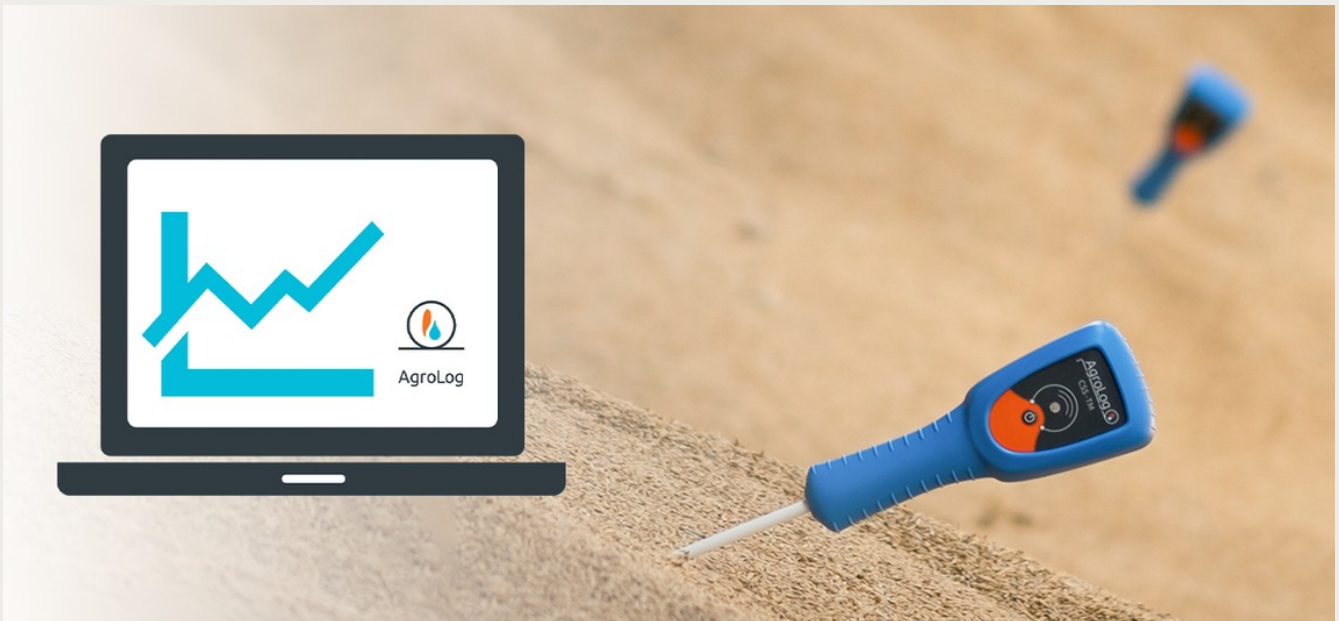

Roof ventilation

Components integrated into the silo's aeration system.

AGI images and equipment. The configuration is defined for each project.

MONITORING / AGI FRAME

Know what is happening during storage.

AGI temperature monitoring solution.

Track temperature over time.

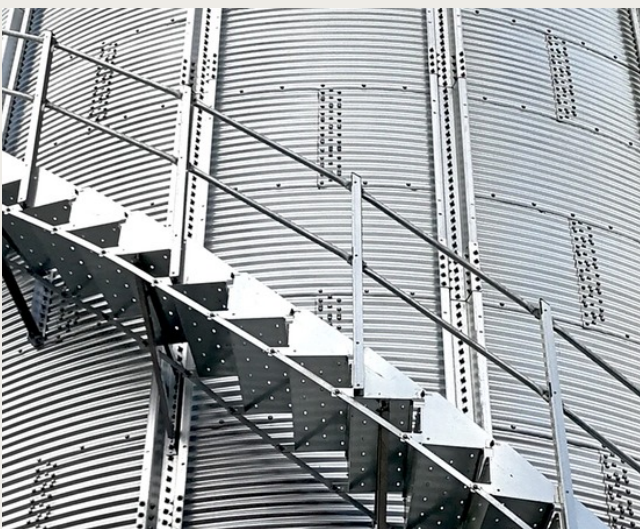

Sensors and data readings support the operator's decisions. We select a system suited to the installation and how it is operated.

STRUCTURES AND INTEGRATION

The connections that make it all work.

Catwalks and support structures. Photograph: AGI.

Access. Support. Integration.

We coordinate structures, equipment and maintenance access. Beavers can integrate silos and flat storage buildings within the same grain facility.

AGI images and equipment. The configuration is defined for each project.

INVESTMENT VALUE

Good value starts with design.

Grain facility. Photograph: AGI.

Quality equipment. Competitive prices.

Sizing

Capacity and throughput are based on your operations.

Coordination

Equipment and civil works are assessed together.

Phasing

We plan the investment and future expansion.

DELIVERY AND MAINTENANCE

From configuration to operation.

AGI access accessories and unloading equipment.

01 We define the solution

Objectives, site, equipment and budget.

02 We design and build

Coordinated documentation, civil works and installation.

03 We prepare for handover

Tests and checks in line with the design and contract.

04 We stay by your side

Maintenance, repairs and planned expansion.

Let's plan your investment.

Tell us where the site is, which grains you store and the capacity you have in mind.
